Description

The Covid-19 crisis has a global, profound and long-lasting impact on society and business. It also expedites changes which would otherwise take a long time to permeate, with such changes likely to stay. The webinar discusses how some of those changes redefine the future business and a new model of cyber security that has to meet the challenge of zero-trust model, work-from-anywhere, cloud adoption and proactive cyber defence. We will also discuss how organisations should respond to these challenges.
